

Community-based Cancer Research Presentations and Discussions

BIOMS 5665 (#5188) | Every other Wednesday | 5:15-6:30PM

People with cancer want scientists involved in cancer research to understand that they are more than cells or molecular pathways.

They are people first.

–Bob Riter, Director for the Cancer Resource Center of the Finger Lakes

It is important for scientists to be able to clearly express their knowledge to the public. In BIOMS 5665, students will get the opportunity to present complex cancer topics to members of the cancer community. Students will also participate in social media conversations and create blog posts regarding popular cancer science in the media. Guest lecturers, such as Sandra Steingraber, involved in community advocacy will join the conversation throughout the semester.
